Commit hooks, best practices

Код в репозитории очень разного
стиля — тяжело разбираться

Сложно разобраться в комитетах,
когда какие изменения были

Много комитов FIX Tests

Pre commit / Merge hooks

Tests on commit

Guidelines / Style Guide

Rules / Conventions

Best Practices

Code Review тоже?

Code Review конечно, но этому надо учиться

<https://google.github.io/eng-practices/review/reviewer/>

- The code is well-designed.
- The functionality is good for the users of the code.
- Any UI changes are sensible and look good.
- Any parallel programming is done safely.
- The code isn't more complex than it needs to be.
- The developer isn't implementing things they *might* need in the future but don't know they need now.
- Code has appropriate unit tests.
- Tests are well-designed.
- The developer used clear names for everything.
- Comments are clear and useful, and mostly explain *why* instead of *what*.
- Code is appropriately documented (generally in g3doc).
- The code conforms to our style guides.
